

MTS400 – SATA III 6Gb/s M.2 SSD

Transcend MTS400 series are M.2 SSDs with high performance and quality Flash Memory assembled on a printed circuit board. These M.2 SSDs feature cutting-edge technology to enhance product life and data retention. MTS400 is designed specifically for various applications such as Ultrabooks, industrial PCs, vehicle PCs and road surveillance recording.

- Power Supply: 3.3V ± 5%
- Fully compatible with devices and OS that support the SATA III 6.0Gb/s standard
- Compliant with M.2 standards in SATA specification

Features

- Advanced global wear-Leveling and block management for reliability
- Built-in ECC (Error Correction Code) functionality
- Features a DDR3 DRAM cache
- Supports DEVSLP mode
- Supports Advanced Garbage Collection
- Supports enhanced S.M.A.R.T. function
- Real time full drive encryption with Advanced Encryption Standard (AES) (Optional)
- Supports partial and slumber mode
- Supports security command
- Supports Hardware purge and write protect (Optional)
- Supports Transcend SSD scope pro (Optional)
- RoHS compliant

Specifications

Physical Specification						
Form Factor		M.2 TYPE 2242-D2-B-M				
Storage Capacities		32 ~ 512 GB				
Length		42.00 ± 0.15 mm	1.654 ± 0.006 inch			
Dimensions	Width	22.00 ± 0.15 mm	0.866 ± 0.006 inch			
	Height	Max 3.58 mm	Max 0.1409 inch			
Input Voltage		$3.3~\text{V}\pm5~\%$				
Weight		4 g ± 5 %				
Connector		M.2 module notch B+M				

Environmental Specifications				
Operating Temperature		0 °C to 70 °C		
Storage Temperature		- 40 °C to 85 °C		
Operating		0 % to 95 % (Non-condensing)		
Humidity Non-Operating		0 % to 95 % (Non-condensing)

^{*} For SATA application, these pins connect to GND internally

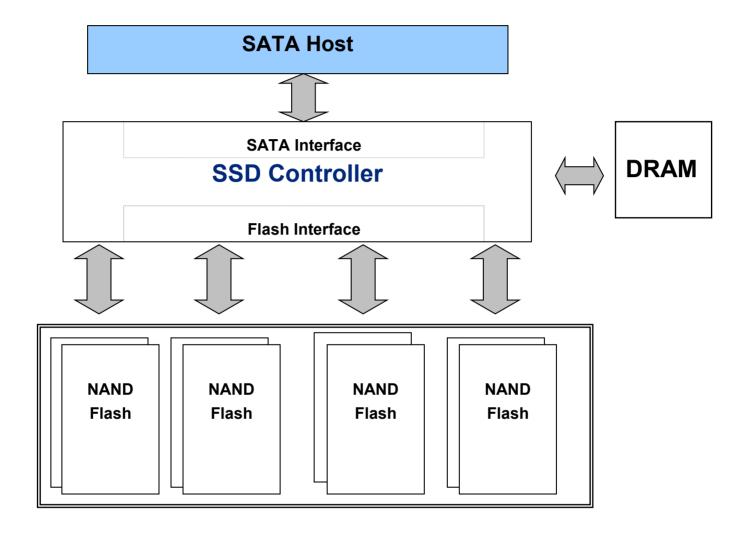

^{**} Device Activity Signal / Disable Staggered Spin-up

^{***} Device Sleep, Input. If driven high the host is informing the SSD to enter a low power state

^{****} Manufacturing pins. Do not connect

Block Diagram

Features

Global Wear Leveling – Advanced algorithms to enhance wear-leveling efficiency.

Global wear leveling ensures that every block has an even erase count. This helps to extend the life expectancy of an SSD.

There are three main processes in global wear leveling:

- (1) Record the block erase count and save this in the wear-leveling table.
- (2) Find the static-block and save this in the wear-leveling pointer.
- (3) Check the erase count when a block is pulled from the pool of spare blocks. If the block erase count is larger than WEARCNT, then swap the static-block and over-count-block.

• ECC Algorithm

The controller uses BCH 60 Bit ECC algorithm per 1024 bytes depending on the structure of the flash. BCH60 may correct up to 60 random error bits within 1024 data bytes. With the help of BCH60 ECC, the endurance of Transcend SSD is greatly improved.

Bad Block Management

When the flash encounters ECC failed, program fail or erase fail, the controller will mark the block as a bad block. This will prevent the usage of bad blocks which may result in data loss in the future.

Advanced Garbage Collection

Transcend SSD has perfect garbage collection mechanism to help SSD improve performance. Advanced Garbage collection can efficiently manage memory management to let SSD can always has stable performance. With Transcend advanced flash management, the drive can still keep high performance after long time operation

Enhanced S.M.A.R.T. function

Transcend SSD supports S.M.A.R.T. command (<u>Self-Monitoring</u>, <u>Analysis</u>, and <u>Reporting Technology</u>) that allows the user to read the health information of the SSD. Transcend also define some innovated S.M.A.R.T. features which allows the user to evaluate the status of the SSD in a much more efficient way.

Power Shield

The controller uses internal power shield circuit to prevent SSD from damage when a sudden power outage occurs. The SSD's internal power detect mechanism can monitor power provided by host. When a sudden power outage happens, the SSD can execute power shield mechanism to protect data in the SSD.

Hardware Purge and Write Protect

The SSD has optional features which include hardware trigger for quick data erase and write protect. These features may be enabled by simply connecting a switch to the designated pins.

• StaticDataRefresh Technology

Normally, ECC engine corrections are taken place without affecting the host normal operations. As time passes by, the number of error bits accumulated in the read transaction exceeds the correcting capability of the ECC engine, resulting in corrupted data being sent to the host. To prevent this, the controller monitors the error bit levels at each read operation; when it reaches the preset threshold value, the controller automatically performs data refresh to "restore" the correct charge levels in the cell. This implementation practically restores the data to its original, error-free state, and hence, lengthening the life of the data.

DEVSLP

DEVSLP is a new host-controlled SATA interface power state which together enables a SATA host and device to enter an ultra-low interface power state, including the possibility of completely powering down host and device PHYs.

ATA Command Register

This table and the following paragraphs summarize the ATA command set.

Command Table

Command rable							
Support ATA/ATAPI Command	Code	Protocol					
General Feature Set							
EXECUTE DIAGNOSTICS	90h	Device diagnostic					
FLUSH CACHE	E7h	Non-data					
IDENTIFY DEVICE	ECh	PIO data-In					
Initialize Drive Parameters	91h	Non-data					
READ DMA	C8h	DMA					
READ LOG Ext	2Fh	PIO data-In					
READ MULTIPLE	C4h	PIO data-In					
READ SECTOR(S)	20h	PIO data-In					
READ VERIFY SECTOR(S)	40h or 41h	Non-data					
SET FEATURES	EFh	Non-data					
SET MULTIPLE MODE	C6h	Non-data					
WRITE DMA	Cah	DMA					
WRITE MULTIPLE	C5h	PIO data-out					
WRITE SECTOR(S)	30h	PIO data-out					
NOP	00h	Non-data					
READ BUFFER	E4h	PIO data-In					
WRITE BUFFER	E8h	PIO data-out					
Power Management Feature Set							
CHECK POWER MODE	E5h or 98h	Non-data					
IDLE	E3h or 97h	Non-data					
IDLE IMMEDIATE	E1h or 95h	Non-data					
SLEEP	E6h or 99h	Non-data					
STANDBY	E2h or 96h	Non-data					
STANDBY IMMEDIATE	E0h or 94h	Non-data					
Security Mode Feature Set							
SECURITY SET PASSWORD	F1h	PIO data-out					
SECURITY UNLOCK	F2h	PIO data-out					
SECURITY ERASE PREPARE	F3h	Non-data					
SECURITY ERASE UNIT	F4h	PIO data-out					
SECURITY FREEZE LOCK	F5h	Non-data					
SECURITY DISABLE PASSWORD	F6h	PIO data-out					
SMART Feature Set							
SMART Disable Operations	B0h	Non-data					
SMART Enable/Disable Autosave	B0h	Non-data					
SMART Enable Operations	B0h	Non-data					
SMART Execute Off-Line Immediate	B0h	Non-data

F = content (byte) is fixed and does not change.

V= content (byte) is variable and may change depending on the state of the device or the commands executed by the device.

X= content (byte) is vendor specific and may be fixed or variable.

R= content (byte) is reserved and shall be zero.

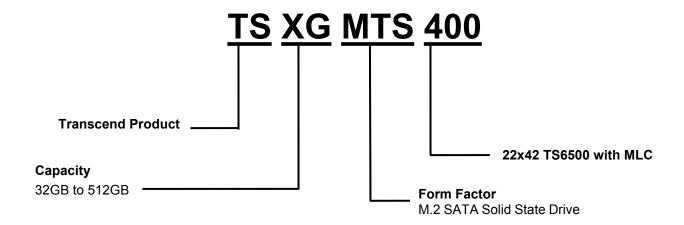

SMART Attributes

The following table shows the vendor specific data in byte 2 to 361 of the 512-byte SMART data

Attribute ID (hex)	J 151.			Attribute		Attribute Name		
01	MSB	00	00	00	00	00	00	Read Error Rate
05	LSB	MSB	00	00	00	00	00	Reallocated sectors count
09	LSB	-	-	MSB	00	00	00	Power-on hours
0C	LSB	-	-	MSB	00	00	00	Power Cycle Count
A0	LSB	-	-	MSB	00	00	00	Uncorrectable sectors count when read/write
A1	LSB	MSB	00	00	00	00	00	Number of valid spare blocks
A3	LSB	MSB	00	00	00	00	00	Number of initial invalid blocks
A4	LSB	-	-	MSB	00	00	00	Total erase count
A5	LSB	-	-	MSB	00	00	00	Maximum erase count
A6	LSB	-	-	MSB	00	00	00	Minimum erase count
A7	LSB	-	-	MSB	00	00	00	Average erase count
A8	LSB	-	-	MSB	00	00	00	Max erase count of spec
A9	LSB	-	-	MSB	00	00	00	Remain Life (percentage)
AF	LSB	-	-	MSB	00	00	00	Program fail count in worst die
В0	LSB	MSB	00	00	00	00	00	Erase fail count in worst die
B1	LSB	-	-	MSB	00	00	00	Total wear level count
B2	LSB	MSB	00	00	00	00	00	Runtime invalid block count
B5	LSB	-	-	MSB	00	00	00	Total program fail count
В6	LSB	MSB	00	00	00	00	00	Total erase fail count
C0	LSB	MSB	00	00	00	00	00	Power-off retract Count
C2	MSB	00	00	00	00	00	00	Controlled temperature
C3	LSB	-	-	MSB	00	00	00	Hardware ECC recovered
C4	LSB	-	-	MSB	00	00	00	Reallocation event count
C5	LSB	MSB	00	00	00	00	00	Current Pending Sector Count
C6	LSB	-	-	MSB	00	00	00	Uncorrectable error count off-line
C7	LSB	MSB	00	00	00	00	00	Ultra DMA CRC Error Count
E8	LSB	MSB	00	00	00	00	00	Available reserved space
F1	LSB	-	-	-	-	-	MSB	Total LBA written (each write unit = 32MB)
F2	LSB	-	-	-	-	-	MSB	Total LBA read (each read unit = 32MB)
F5	LSB	-	-	-	-	-	MSB	Flash write sector count
